DTJ STORE FACTORY · TEAM GUIDE · 12 OCT 2026

Start here, *whatever your job*

How DTJ makes Shopify product pages and switches its apps on or off on every shop, without depending on one person. **Most people only need Telegram (part 1).** Designers also do part 2; a developer taking over does part 3.

1 Everyone: the Telegram bot *(2 minutes)*

1. In Telegram, search **@DtjPageDesignerBot** and send `/start`.
2. It replies with your number. Send that number to Harsh. If Harsh doesn't answer, send it to any teammate who already uses the bot; they tell Claude "add <your name> to the bot, number <number>".
3. You then have **full access**:
   - **A product page:** send a product link from the shop's website (a note after it is fine). The bot sends the preview link back when the page is ready.
   - **The app switch:** `/shops` lists every shop and whether DTJ's apps are ON; `/status shop` shows one; `/off shop` and `/on shop` switch them after you tap a confirm button.

2 Designers: a laptop that designs the pages *(30 minutes, once)*

You'll receive privately (never in a group chat)

- the DTJ **Claude** login (the team's shared account)
- an invite to the **GitHub** repo `harsh-shopify-dev/dtj-agency-automation` (make a free account at github.com first, and accept the invite from your email)
- an **n8n** invite to your email (accept it and set a password)
- a **Bitwarden Send** link with the Theme Access password of each shop you'll design for

1 Install Claude

Open **claude.ai/download**, download **Claude for Windows**, install it and sign in with the DTJ Claude login.

2 Open PowerShell

Press the Windows key, type **PowerShell**, click **Windows PowerShell**. To run a command: copy it, right-click inside PowerShell to paste, press Enter, and wait for the line to end with `>` again.

3 Install Git

```
winget install --id Git.Git -e --accept-source-agreements --accept-package-agreements
```

When it's done, close PowerShell and open it again. If it says "winget is not recognised": install **App Installer** from the Microsoft Store, then try again.

4 Download the project

```
cd $HOME
git clone https://github.com/harsh-shopify-dev/dtj-agency-automation.git
```

A GitHub window opens the first time: sign in with the GitHub account that got the invite.

5 Let Claude set everything up

In Claude, open the **Code** tab, choose the folder `dtj-agency-automation` in your user folder, and type:

> TYPE IN CLAUDE `set up the store factory`

Claude installs what's missing and opens a terminal tab for the two things only you can type: your n8n token (in n8n: **Settings > MCP Access**) and your shop passwords. Type them only in that terminal tab, never in the chat, and type nothing there after it says "Done". Claude finishes with "Ready".

6 Design pages

> TYPE IN CLAUDE `listen for the telegram call`

Claude designs every request people send to the bot, while you're at the laptop (it stops after 8 hours). Only one laptop should listen at a time. For a single page instead: `handle the Claude Code trigger in n8n`.

3 A developer taking over the technical side

1. **Bitwarden:** Tushar or Harsh adds you to the **DTJ** organization (the free plan has 2 members, so the person leaving is swapped out).
2. Do part 2. The setup then fills **every** key from the vault.
3. Read, in the project: `docs/ACCESS-AND-KEYS.md` (every account and key, and the leave checklist) and the newest entry of `docs/HANDOFF.md` (what is open right now).
4. Get added to: the GitHub repo (admin), Cloudflare (DTJ's account), n8n (owner), Hostinger and the Shopify Dev Dashboard organization that owns DTJ's apps.

4 If Harsh doesn't answer: *who decides*

No yes needed

- The bot
- Designing pages into a shop's **draft** theme
- The app switch (it has its own confirm button)

A yes from Harsh, or any teammate

- Deploying the install service
- Releasing app updates
- Creating a store
- Publishing an n8n workflow
- Anything customers see live

When Harsh isn't reachable, tell Claude: "Harsh isn't reachable, I approve <the action>", with your name. One yes covers one action.

Never, whoever asks

- Deleting things
- Force-pushing code
- Passwords or keys in any chat

5 "We need a store ready *in a few hours* "

`ABOUT 20 MINUTES A PAGE`

The shop is already set up

It shows in `/shops`. Send product links to the bot, and a designer types `listen for the telegram call`.

`1 TO 3 HOURS`

A brand-new shop

In Claude, type `add a new shop`; it walks through every step. From the client you need collaborator access for DTJ and the **store owner** available to click three install links. A shop inside DTJ's own Shopify organization takes about 30 minutes.

Passwords and keys: only ever in the hidden prompts and terminal tabs Claude opens, or in Bitwarden. Never in WhatsApp, Telegram, email, a document or the Claude chat.

Who to ask: Harsh first. If he isn't reachable, Tushar. If neither is, any teammate on the bot: the rules in part 4 let you carry on.

The full guide is in the project once you've downloaded it: `docs/TEAM-GUIDE.md` and `docs/START-HERE.md`.
